

Jay'Shawn Chandler

My flowchart diagram displays if A is greater than B: $A > B$. Also it displays if B is greater than A: $B > A$. Lastly it displays if A is equal to B: $A = B$.

The value I assigned to variable A is the number 28 and the value I assigned to variable B is 14.

In my first logical process of my flow chart I start with the "oval" Terminator shape. Next there is an arrow drawn downward to the next shape which is a rectangle which is used to process represent a step it reads "Read A" after that there is another arrow drawn downward to a rectangle shape to represent a step it reads "Read B".

Next there is an arrow drawn downward to the diamond shape. This is my first decision. And since A is greater than B. I drew a "Yes" arrow to a document shape. Then I drew an arrow downward to a rectangle. The It reads $A > B$. Next I drew an arrow downward to the parallelogram shape to output $A > B$. Lastly I drew an arrow downward to the oval to end the flowchart.

From the "End" oval I drew a line upward to the start oval. This shows a constant continuation of flow; a repeated process.

At the first decision I also presented if the statement A is greater than B was not true. I presented if the statement was "No". I did this by drawing a line from decision parallelogram Is $A > B$ to the other parallelogram decision "Is $B > A$ ". Next I drew an arrow downward to the document shape. To represent $B > A$. Then I drew an arrow downward to a rectangle to represent to $B > A$. Then I drew an arrow downward to a parallelogram in order to output $B > A$. Lastly to finish the logical process of $B > A$. I drew an arrow horizontally to the left to the "End" oval.

From the $B > A$ diamond decision statement I also presented if that statement was false. If that statement was "No". I did this drawing an arrow from the $B > A$ decision statement to the decision $A = B$. Next I drew an arrow downward to the document shape. To represent $A = B$. Then I drew an arrow downward to a rectangle to represent to $A = B$. Then I drew an arrow downward to a parallelogram in order to output $A = B$. Lastly to finish the logical process of $A = B$. I drew an arrow horizontally to the left to the "End" oval.
